Worldwide Offices
Basel, Switzerland | Beijing, China
Horsham, PA, USA | Mumbai, India
Tokyo, Japan

Meet with global and regional clinical researchers, industry, and academia professionals to engage in interactive strategic discussions on current clinical research and medical devices regulations and polices, and implementation approaches to future research around the world and in Latin America.

CONFERENCE OVERVIEW

DIA's 11th LACCR is the top regional academic forum on clinical research in Latin America. LACCR is the only neutral forum in the region devoted to fostering the integration of professionals in the field, aiming to fully develop Latin America's potential in the scope of clinical research globally. The two-day conference will feature presentations on hot topics ranging from global issues to focusing on specific details of clinical research and medical devices. Speakers will highlight the most relevant issues for the Latin American region in regulatory, pharmaco-economy, ethics, a clinical site's infrastructure, the components of clinical research, and much more.

TARGET AUDIENCE

This conference is directed at:

- Research professionals: clinical, laboratory, site members, and CRAs
- CROs and SMOs
- Service providers
- Clinical investigators (active and potential)
- Ethics committees
- Regulatory agencies
- Medical education institutions and associations
- Pharmaceutical sponsors
- Other professionals considering initiating their activities in this professional area.
- Regulatory affairs professionals
- Supply chain industry professionals

LEARNING OBJECTIVES

- Manage the different phases of a sponsored trial, providing guidance and leadership to the study team in order to achieve or surpass the project objectives and become competitive in the research arena
- Understand what kind of professional development can be achieved in clinical research
- Understand the long way from basic research to public health innovation in the clinical research arena
- Understand the regulatory principles and procedures in clinical research and interact with the regulatory stakeholders in the region
- Compare the Latin America opportunities with other emerging markets in clinical research

FEATURED TOPICS

- Clinical research sites issues
- Pharmaco-economy topics
- Ethics in clinical research
- Scientific issues
- Regulatory updates
- Generic products
- Integration of the supply chain industry components
- Excellence in education and training
- Medical devices
- Stakeholders' role and active participation in the industry
